I want to use easYgen-3000XT's scaleable analog output to show powerfactor on an external instrument

Clemens - 2024-09-27 - easYgen-3000XT

We would like to show easYgens generator power factor cosphi via analog output on an external instrument . ▲For this we use easYgen's analog output 6 (0-20mA). The analog display has an input of 0-10V. 0-10V voltage we are getting by adding a 500Ω resistor. (I=U/R)

PF 0,5 kap. \triangleq 0mA \triangleq 0VPF 1 \triangleq 10mA \triangleq 5VPF 0,5 ind. \triangleq 20mA \triangleq 10V

Please add 01.20 Gen PF % in the AnalogManager of ToolKit and set the min and max values accordingly.

In your example it would look like this...
(50% =5V= corresponds to PF=1)
