backward compatibility of easYgen3000 to before May 2010 - release 5

Simon - 2024-09-27 - easYgen-3000

The easYgen-3000 series is subject to continuous improvement. The release 5, introduced in May 2010 with new part numbers, includes new software and hardware.

- The CAN bus message handling has changed to support the Remote Panel. This leads to incompatibilities in load-share applications with more than 10 gensets with different release steps.
- The hardware has been changed due to new feature implementation. Old software does not run on new hardware.

The attached slides show the combinations and possibilities for enhancements, repair and replacement
