

easYview advanced customization services

Simon - 2025-03-17 - easYview

Looking to elevate your easYview SCADA system?

While the easYview offers full customization, we understand that some customers may prefer to focus on their core business activities and outsource their screen customization.

That's where Woodward's advanced customization services come in. Our team of experts combines control expertise with application know-how to deliver tailor-made visualization solutions based on the easYview.

What specific visualizations do you need? Whether you already have an initial specification or need guidance, we're here to help. Contact us today to discuss your needs.

The following shows a few examples of the customization capabilities Woodward offers. Please use the attached "mini SCADA customization project form" to request this service.
