## I want to use easYgen-3000XT's scaleable analog output to show powerfactor on an external instrument

Clemens - 2024-09-27 - easYgen-3000XT

We would like to show easYgens generator power factor cosphi via analog output on an external instrument .

For this we use easYgen's analog output 6 (0-20mA).

The analog display has an input of 0-10V.

0-10V voltage we are getting by adding a  $500\Omega$  resistor. (I=U/R)

```
PF 0,5 kap. \triangleq 0mA \triangleq 0V
PF 1 \triangleq 10mA \triangleq 5V
PF 0,5 ind. \triangleq20mA \triangleq 10V
```

Please add  $\,$  01.20 Gen PF  $\,$ % in the AnalogManager of ToolKit and set the min and max values accordingly.

```
In your example it would look like this... (50% =5V= corresponds to PF=1)
```
