ESEPRO Rev C supports now MFR3 , GCP-31 & GCP-32 GW4 Profibus DP emulation

2024-02-21 - Clemens - Software Release

To replace the old MFR3 and GCP31/32 controls that are currently connected to a GW4 ProfibusDP, it is recommended to use the easYgen-3000XT and ESEPRO Gateway P/N 8445-1046 Rev 3 instead. These new controls can be easily connected to the upper PLC, without requiring any changes to the existing system protocols. The easYgen-3000XT and ESEPRO Gateway P/N 8445-1046 Rev 3 are compatible with the same protocols as MFR2 SB and GW4 PRO, which ensures seamless integration into the system. It is important to follow the recommended steps for installation and configuration of the new controls to ensure a smooth transition and optimal system performance.
